### Education

- 2007–2010 **Doctor of Philosophy**, *Griffith University*, Brisbane, Australia  
Quantum physics
- 2006 **Bachelor of Science (Hons)**, *Griffith University*  
Majoring in Physics
- 2002–2005 **Bachelor of Science**, *Griffith University*  
With Advanced Studies, dual-majors in Physics and Applied Mathematics
- Bachelor of Information Technology**, *Griffith University*  
Majoring in Computer Science

### Laboratory and Research Experience

- 2011–Present **Quantum Space: Research at the Institute for Quantum Computing**  
*Post-doctoral research in the Quantum Photonics Laboratory of Assoc. Prof. Thomas Jennewein, University of Waterloo; QEYSSat Science Team Technical Lead.*  
Studies and experiments towards global quantum key distribution through implementations between ground locations and orbiting satellites. I investigate solutions to practical issues of high-loss, restricted processing capacity, and high-precision timing and polarization reference frame alignment, with focus on applications to satellite uplinks for quantum communications protocols. I also develop systems to support the experimental laboratory and field demonstrations, including data collection and processing, and stage motion control. My work, largely centered around development of the Quantum Encryption and Science Satellite (QEYSSat) and related projects, is done in collaboration with governmental and industry partners, including the Canadian Space Agency, Honeywell (formerly COM DEV), Neptec, INO, Xiphos, and others. I also contributed to experimental demonstrations of violations of three-partite Bell-like inequalities, performing spacetime analysis to ensure strict separation of all relevant source and measurement choice events.
- 2007–2010 **Quantum Measurement: Concepts, Algorithms, and Experiments in Photonic Quantum Information Science**  
*PhD research in the Quantum Optics and Information Laboratory. Advisers: Prof. Geoff Pryde, Prof. Howard Wiseman, Griffith University.*

Experiments with a central theme of photonic implementations of quantum-enhanced measurement. I conducted the first demonstrations of unbiased phase measurement schemes with precision scaling at the fundamental limit, both with and without the use of adaptive feedback. I also constructed and experimentally demonstrated multiple-copy nonorthogonal quantum state discrimination schemes, employing local measurements and adaptive feedback, that are optimally robust in the presence of depolarising noise. Finally, I experimentally demonstrated weak measurements of two-photon entangled states, deriving negative so-called “weak” probabilities of joint outcomes of conjugate measurements in the context of a Bell-like measurement.

2006 **Advanced Photonic Measurements for Quantum Information**

*Bachelor of Science (Hons) project. Adviser: Prof. Geoff Pryde, Griffith University. (Experiments primarily conducted in the Quantum Technology Laboratory of Prof. Andrew White at the University of Queensland.)*

The photonic implementation of an entangling nonprojective quantum measurement scheme. I constructed a quantum nondemolition measurement device based on a nondeterministic controlled-NOT gate employing polarising beam displacers, and a quantum circuit which unambiguously discriminates nonorthogonal polarisation states. I then studied the outcomes of the combination of these two circuits towards developing a nondemolishing unambiguous state discriminator.

2004 **Using Wavelet Transforms to Assist the Solution of van der Waals Forces**  
*Bachelor of Science Advanced Studies project. Adviser: Prof. John Dobson, Griffith University.*

A theoretical investigation into the usefulness of two-dimensional wavelet transformations of processing matrices describing long-ranged van der Waals interactions. I showed that wavelet transformations are likely good candidates to assist the efficient solution of electronic ground state energy in a simple model material known as a “jellium slab” using the random phase approximation procedure.

## Teaching and Other Work Experience

- 2020–Present Referee for Quantum Science and Technology
- 2019–Present Referee for Nature Communications Physics
- 2018–Present Referee for Optics Express
- 2017–Present Co-founder and Chief Architect of QEYnet Inc.  
Referee for EPJ Quantum Technology
- 2015–Present Referee for NPJ Quantum Information  
Referee for Quantum Information Processing
- 2014–Present Referee for Nature Communications
- 2011–Present Supervision of undergraduate and graduate students (>10) taking part in research projects at the Institute for Quantum Computing, University of Waterloo  
Referee for Physical Review Letters
- 2011–2016 Adjunct member, Centre for Quantum Dynamics, Griffith University
- 2011 Poster Presentation Judge, Graduate Student Research Conference, University of Waterloo
- 2009–Present Referee for Physical Review A
- 2009 Laboratory demonstrator, 3rd-year undergraduate physics, Griffith University
- 2007 Laboratory demonstrator, 1st-year undergraduate physics, Griffith University
- 2005, 2006 Student Ambassador for Griffith University, “Mythbusters” events and Open Day (2006)

---

## Awards, Scholarships, and Memberships

- 2011–Present Member, Australian Institute of Physics
- 2011–2013 Banting Postdoctoral Fellowship (Canada)
- 2011 Queensland state nominee for the Australian Institute of Physics Bragg Gold Medal for Excellence in Physics
- 2010 Chancellor’s Medal, best PhD thesis in the Science, Environment, Engineering and Technology Group, Griffith University
- 2007–2010 Australian Postgraduate Award
- 2006–2010 Secretary, Griffith University Maths and Physics Association (student organisation)
- 2006 Honours 1st Class, Griffith University
- University Medal, Griffith University
- Griffith Award For Academic Excellence
- 2005 Griffith University School of Computing and Information Technology combined academic program Information Technology Award
- Information Technology Medal, Griffith University
- 2004 Griffith Award For Academic Excellence
- 2003–Present Member, Golden Key International Honour Society
- 2003 Griffith Award For Academic Excellence
- 2002 Griffith Award For Academic Excellence

## Skills and Interests

Physics, computation and computer systems, and general science and technology  
 Quantum information, algorithms, and complexity  
 Quantum control and adaptive quantum measurement  
 Numerical simulation and data processing  
 Experimental implementations in photonics  
 Optical circuit construction, devices, and device drivers  
 Computer programming paradigms and languages: C/C++, C#, Python, Matlab, Haskell, VHDL, LabVIEW, and others  
 Unix system administration; Linux and open-source software  
 Computer networks and communications systems  
 Misc. computer skills, media creation, mark-up languages such as HTML and L<sup>A</sup>T<sub>E</sub>X  
 Project management and communication skills

## Presentations
